Wittykiosk

The smart and cost-effective solution to guide visitors on premises.

Wittykiosk provides a customized kiosk solution with advanced software that interacts with your visitors using **conversational voice interface**. It's easy to ask a question, get directions, or get connected with companies.

How does it work?

It is a kiosk-like device with voice control, touch screen, camera, speakers and ticket printer, that has been tailored for the use of big **office centres**.

Visitors can contact desired companies via full **HD video calls** and representatives can allow or deny access to the offices.

People also can **ask information** about toilets, lifts on premises/nearby cafes and restaurants, parking, etc.

And all of that is achieved using conversational voice interface - it is just like a real person. Also, there is a backup option to just use a **touch-based menu** to navigate the system.

Product Features

- Voice recognition
- Face detection
- Touch screen
- Video calls
- Visitor control
- Ticket printer
- Multi-language
- Text-to-speech

Cost is comprised of

- **Kiosk**
- **Installation**
- **Monthly fee**
