Description

Eurocrickets – cricket farm based in Lithuania. We grow and process crickets *Acheta Domesticus*, purchased with certificates of origin from Finland. We are exceptional in the breeding of crickets - in each step of farming we think about sustainability and environmentally friendly materials with maximum less of waste. In breeding process our insects do receive only the highest quality, specially adapted, feeds for crickets free from soya, gmo, fishmeal or harsh animal products, we do not use any hormones or medicine while breeding our insects what is against nature of insects in general, use only very pure water, prepared according to the specific requirements. While breeding crickets we do think about sustainable environment and nature friendly future. Our production is a special food of the future, available already today!
