Description

Closed Joint Stock company "INTA" was found on 16th of March, 1990 - the 5th day of re-establishment of Lithuanian independence. INTA is one of the first, who started to provide copiers, telecommunication equipment and support services for Lithuanian market. INTA's main business direction is implementation and maintenance of ICT and high tech projects in the fields of radiation safety, X-ray inspection, cargo tracking, safety and control etc. Company also provides cargo scanners images analysis and threat objects recognition training services. INTA was officially recognized as compliant to the ISO 9001:2015 International Management Quality Standards. Company was certified by the Bureu Veritas Quality International.

Business Line

Cargo scanners images analysis and threat objects recognition training

List of products

Nowadays Customs agencies are looking for the ways to meet their objectives by using technical scanning equipment to increase the efficiency of examinations, but the equipment by itself is not enough to gain substantial results because the core activity in scanner project is x-ray image analysis. "The most

sophisticated machines become worthless if the people who operate them and visually inspect the X-ray images are not qualified to do so (International Journal of Industrial Ergonomics, 2014.).” In order to increase efficiency without sacrificing security we’ve created Cargo scanners images analysis and threat objects recognition training. All the tests and exercises are based on a 40 feet tall Standard test container (in short - STC). STC incorporate more than 150 different realistic smuggling situations. The STC is divided in to four different sections: cargos and threat targets, passenger car and threat targets, individual objects and threat targets, along with a scanner perform
