Description

MB "Lemara" is a metal processing company that provides CNC turning and milling services. Our company specializes in producing elements requiring high precision for automatic and robotic production, processing lines, and conveyors. We work with aluminum, stainless steel, steel, copper, brass, other metals, and various plastics. We cooperate with many partners, so with their help, we can perform practically all possible material processing operations, such as wire cutting, water cutting, laser cutting, plasma cutting, electroerosion cutting, grinding, anodizing, welding, and bending. We cooperate with both Lithuanian and foreign manufacturers. Founded in 2016, Lemara is rapidly expanding and successfully working internationally. The main businesses we are working with are in the food, aviation, lasers, optics, defense, and biotechnology industries.
