## Description

"August ir Ko" UAB is established in 1998. Our technology is based on the experience of more than 40 years of scientific research, as well as on the development and life experience. More than 10000 owners of the individual houses, separate villages, schools, coffee-houses, motels and other objects are satisfied with well installed and perfectly operating equipment in Lithuania and the Baltic States, as well as in many European, Asian and African countries. The company has a certificate, that grants a right to design and do the construction work of the building part. All our products satisfy the strict environmental requirements. Because of the high quality effluent water it can be infiltrated into the ground, let into the open waters, rainwater systems without making any harm for the nature.

---

## Business Line

Wasterwater treatment plants

---

## List of products

Internationally acclaimed „August“ waste water plants are unique, due to constantly improved advantages - especially high waste water treatment parameters, low energy consumption, and small excess sludge production and there are just a few of the many. Our residential and small wastewater treatment plants from AT6 to AT225 were continually developed more than 20 years in order to meet the stringent local standards set out in many European countries. The residential and small wastewater treatment systems from AT6 to AT50 are in compliance with requirements of European Standard EN 12566-3 and hold the CE Mark of Conformity. The residential and small wastewater treatment plants use a continuous-flow, suspended growth activated sludge process with the patented technology of AUGUST VFL® for wastewater treatment plants and combine the multiple processes in a single tank.
